DELTA®-DRAIN 9000

Section 07 10 00 - Dampproofing and Waterproofing

PART 1 GENERAL

1.1 SECTION INCLUDES

- A. Below grade waterproofing.
- B. Below grade drainage sheets.
- C. Plaza deck and planter drainage sheets.

1.2 RELATED SECTIONS

- A. Section 07 11 13 Bituminous Dampproofing.
- B. Section 07 12 00 Built-Up Bituminous Waterproofing.
- C. Section 07 13 00 Sheet Waterproofing.
- D. Section 07 14 00 Fluid-Applied Waterproofing.
- E. Section 07 16 13 Polymer Modified Cement Waterproofing.
- F. Section 07 16 16 Crystalline Waterproofing.
- G. Section 07 16 19 Metal Oxide Waterproofing.
- H. Section 07 17 13 Bentonite Panel Waterproofing.
- I. Section 31 223 16 Excavation.
- J. Section 31 23 23 Fill: Backfilling.
- K. Section 33 46 00 Sub drainage: Foundation perimeter drainage.

1.3 ALTERNATIVES

- A. See Section 01230 Alternatives, for product alternatives affecting this section.
- B. This section describes a base bid product; refer to Section [_____] for an alternative product.
- C. This section describes an alternative product; refer to Section [_____] for the base bid product.

1.4 REFERENCES

A. AATC 127 - Water Resistance: Hydrostatic Pressure Test; 1998.

1.5 SUBMITTALS

A. See Section 01300 - Administrative Requirements, for submittal procedures.

- B. Product Data: Manufacturer's data sheets on each product to be used, including:
 - Preparation instructions and recommendations.
 - 2. Storage and handling requirements and recommendations.
 - 3. Installation methods.
 - 4. Specimen warranty.
- C. Samples: 4" by 4" (100mm by 100 mm) piece of each type of sheet; minimum 12" (300 mm) long piece of each type of strip; each type of fastener.
- D. Test Reports: Evaluation service reports or other independent testing agency reports showing compliance with specified requirements.
- E. Installer Qualifications: Include minimum of 5 project references.
- F. Executed warranty.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing work of this type and approved by the membrane manufacturer.
- B. Manufacturer's Field Services: Provide the services of a representative accredited by the sheet manufacturer to examine substrates before starting installation, periodically review installation procedures, and review final installed systems.

1.7 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver products to project site in original packaging with labels intact.
- B. Store products in manner acceptable to membrane manufacturer.
- C. When products must be stored for extended periods, keep out of direct sunlight and at temperatures above minus 22 degrees F (minus 30 degrees C).
- D. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.8 WARRANTY

A. 20 year product warranty.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. All Products of This Section:
 - Cosella-Dörken Products Inc: www.cosella-dorken.com
 - 2. Substitutions: [[See Section 01600 Product Requirements][Not permitted]].

2.2 APPLICATIONS

A. Foundation Wall Drainage Sheet: Install drainage sheet over [[waterproofing] [dampproofing]] installed by others, from bottom of wall to grade level, and in locations indicated on the drawings.

- B. Split Slab Applications: Install horizontal application drainage sheet between mud slab and finish slab.
- C. Planters: Install drainage sheet inside planters, over waterproofing by others.
- Lagging Walls: Install drainage sheet on entire surface of walls prior to installation of foundation wall.
- E. Tunnels and Similar Applications: Install drainage sheet over waterproofing membrane by others at top and sides. For Pan Lining Applications, follow manufacturer's recommendations for anchoring.
- F. Plaza Decks: Install horizontal application drainage sheet over waterproofing membrane by others.

2.3 MATERIALS

A. Drainage Sheet for Vertical and Horizontal application: High density polypropylene sheet, dimpled throughout field of sheet; polypropylene filter fabric adhered to top of dimples.

1. i) a. Product: Cosella-Dörken DELTA®-DRAIN 9000

b. Color: Black

c. Working Temperature Range: Minus 22 degrees F (minus 30 degrees C) to 176

degrees F (80 degrees C)

d. Dimpled Thickness: 0.40 inch (10 mm)

e. Compressive Strength: ASTM D 1621: Approximately 18,000 psf (862

kN/m²)

f. Dimpled Sheet Weight:

g. Water Flow Rate in Vertical Orientation:

h. Water Flow Rate in Horizontal Orientation:

ASTM D 3776: 3.05 oz/ft² (750 g/m²)

ASTM D 4716: 27 gal/min/ft (334 L/min/m)

ASTM D 4716: 5.4 gal/min/ft (67 L/min/m)

ii) a. Filter Fabric: Woven polypropylene.

b. Apparent Opening Size: ASTM D 4751: 40 sieve (0.42 mm)

c. Permittivity: ASTM D 4491: 1.36 sec-1,

d. Water Flow Rate: ASTM D 4491: 100 gpm/ft² (4074 L/min/m²)

e. Ultraviolet Resistance:
ASTM D 4355: 70 percent (500 hr)
f. Breaking Load Strength:
ASTM D 4632: 365 lb (1620 N)
g. Elongation at Breaking Load:
ASTM D 4632: 24 percent
ASTM D 4533: 115 lbf (511 N)
i. Puncture Strength:
ASTM D 4833: 100 lb (440 N)
j. Burst Strength:
ASTM D 3786: 480 psi (3304 kPa)
k. Weight, Nominal:
ASTM D 5261: 6.5 oz/yd² (216 g/m²)

B. Accessories as recommended by product manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verify that substrates are sound enough to retain fasteners and suitable for bonding of
- B. Verify that there are no active leaks within area to be waterproofed.

DELTA®-DRAIN 9000 Sept 16, 2009

- C. Verify that sub drainage system has been properly installed.
- D. Verify that finish grade elevations are clearly marked.
- E. Do not begin installation until substrates have been properly prepared.
- F. If substrate preparation is the responsibility of another trade, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

- A. Clean surfaces "broom clean" prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.
 - 1. Remove projections larger than 1/4 inch (6 mm); remove sharp edges.
 - 2. In concrete and masonry, patch cracks and holes so that they provide suitable substrate as recommended by membrane manufacturer.
- C. Mark installation locations on walls prior to starting installation.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's recommended procedure.
- B. Do not install when:
 - 1. Ambient temperature is below minus 22 degrees F (minus 30 degrees C).
 - 2. Concrete has been cured for less than 3 days.
 - 3. Standing water is present.
- C. General Sheet Installation: Start at lowest point and work to top, running length of sheets horizontally and overlapping upper sheets in shingle fashion at least 4 inches (100 mm); lap vertical joints at least 6 inches (150 mm).
 - 1. Install sheets without gaps, wrinkles, creases, or tears.
 - 2. Align and interlock overlapping layers.
 - 3. Secure to substrate at edges and in the field of the sheet using fasteners and methods recommended by sheet manufacturer; stagger fasteners in alternate rows.
 - 4. Flash and seal top edges, around openings and penetrations, and other locations recommended by manufacturer, in manner recommended by manufacturer.
- D. Drainage Sheet: In addition to general sheet installation specified above:
 - 1. Install with protruding dimples on side facing substrate.
 - Unless otherwise indicated, fasten dimpled sheets using specified fasteners with dimpled washers interlocked with sheet at not more than 12 inches (305 mm) on center.
 - 3. At all joints, apply continuous bead of sealant between layers and fasten through both layers with specified fasteners with dimpled washers.
 - 4. At vertical joints, overlap sheets at least 6 inches (150 mm) and interlock dimples, making full contact with sealant.

- 5. At horizontal joints, apply continuous sealant bead between wall and lower sheet and fasten lower sheet along top edge; overlap upper sheet over the lower sheet and fasten through both sheets at lower edge of upper sheet.
- 6. At interruptions and penetrations, apply continuous bead of sealant between sheet and substrate, fasten sheet around entire opening at not more than 8 inches (100 mm) on center, and cover cut edge with flashing strip sealed to wall and fastened at not more than 8 inches (100 mm) on center.
- 7. At inside and outside corners, install sheet as close to substrate as possible without breaking and fasten along both sides entire length of corner, not closer than 5 inches (125 mm) to corner.
- 8. At bottom of walls, extend a single sheet from wall over footing and drainage pipe, if any.
- E. Drainage Sheets: In addition to general sheet installation above:
 - Install with protruding dimples and filter fabric on side facing away from substrate, unless otherwise indicated.
 - 2. On lagging, pile, or earth forms, and other "blind" wall construction, install drainage sheet with filter fabric in contact with form; seal joints in dimpled sheet continuously with tape; anchoring to forms may be by adhesive if necessary.
 - 3. On low-slope split slab installations, install with filter fabric side up; seal dimpled sheet overlaps; anchor sheets sufficiently to prevent movement prior to and during installation of cover.
 - 4. At plaza deck, pavers are not to be installed directly on the drainage sheet. A buffer layer between the drainage membrane and the pavers must be installed. Install with filter fabric side up with butt joints rather than overlap joints.
 - 5. Use C-molding to enclose edges of drainage sheets; in fine silty clay soils, wrap exposed edges with filter fabric before installing C-molding.
 - 6. Cover sheet laps with filter fabric and do not leave dimpled sheet exposed.
 - 7. At bottom of walls, extend a single sheet from wall over footing and drainage pipe, if any.
- F. Repairs to Dimpled Sheet: Apply patch made of same material interlocked, with continuous sealant bead around tear or penetration.
- G. Repairs to Filter Fabric: Tape matching material over damaged area.
- H. After installation of reinforcing bars, inspect drainage sheet and repair damaged sheet and fabric.

3.4 FIELD QUALITY CONTROL

A. Provide the services of a manufacturer's representative to inspect substrates for suitability for installation, to review procedures during construction, and to review the finished work.

3.5 PROTECTION

- A. Do not leave installed membrane exposed to sunlight for more than 30 days after installation; to cover, complete backfill operation or cover with protection board.
- B. Prior to backfilling, inspect waterproofing for tears and other damage and repair.
- C. Take care when backfilling to avoid damage to membrane; replace membrane damaged during backfilling.

- D. Protect installed products until completion of project.
- E. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION
